MangoApps Release – Nov 11th

GUI Enhancements

- 1-Click collapsible menu on your dashboard to give you extra space to read the latest updates.
- The same 1-Click collapsible menu appears on your wiki pages too to help you see more of the wiki content now.
- The collapsed menu is smart to allow you to navigate the list of wikis pages or the different filters on the dashboard without having to expand the navigation control every time.

Events Enhancement

- Ability to add an event to a calendar of your choice
- Outlook Calendar
- Google Calendar
- iCal Calendar
- As an event organizer you & your guests can do so right from the event feed or from the event details page at any time.
- Ability to export the full month calendar for iCal & Outlook is also available

Profile Enhancement

- You activity & your wall are now merged to be one tab. So all activities that you participated (posted an update, wrote a comment or liked an update) will appear in your Activity tab.
- Ability to quickly Follow (or un-follow) a person from the profile page which a new button below the profile picture

Files enhancement:

- Administrator now have the configuration capability to turn on or off MangoApps in-built file viewer to view 300+ document types which includes Office documents, Open Office, PDF, Images, AutoCAD files etc., However if as an administrator you decide to turn it off then a default image based on content type is displayed to the user.
- Quick Access to key file actions like - Upload new version, Download, Preview, Share now available in the feed with the files.
- Bug Fixes

Tasks enhancements:

- The field to enter the task name now auto-expands as more text is entered in it.

- Notes column is now relabeled to be “Comments”. Anything entered here comes as a comment in the task.

Misc Items:

- Better profile, group & project picture containers to enhance the look of your pages
- Dashboard, Profile Details Page, Group Details Page, Project Details Page - All now have titles to indicate the current tab or filter that is selected
- Feeds look cleaned up to show the time along with the feed actions and an icon for the platform from where the feed or feed comment was posted
- Feeds in private groups & projects now show up with the lock icon only.
- On the dashboard the Wall filter on LHS is now My Activity & Wall filter.
- Send Messages now is removed as My Activity & Wall filter has the feeds you send
- Apps Dashboard now available as an explicit 1st item under Apps menu for easy access
- Improved highlighting of the current project status on the project details page
- Default Projects will get created only in MangoProjects & MangoSuite new domains

MangoApps Web Parts:

- MangoApps Group web part & Project web parts are now available. Companies can sign up for MangoApps open API and then after proper authentication with MangoApps can embed MangoApps Group or Project module on their Intranet

Management Interface update:

- Ability to create a private domain from the MangoApps Mgmt. Interface is now available. This is for private cloud or in-premise edition of software only. The domain URL is also customizable to be anything that the user wants from this interface.

Desktop:

- Ability to Share a file internally with colleagues or external users (no sign-in required) is now available from desktop file manager also.
- Based on network setting open in in-built file viewer will be available
- Bug Fixes

Performance Improvements:

- Reduction in the JavaScript download package size
- Fixed issues around cookie management to reduce the amount of cookies being passed back & forth

MangoApps Release – November 25th

The New Mangoldeas - Where your employees share great Ideas and see them graduate.

Executives at organizations large and small now can fulfill their need to innovate faster with new capabilities build into Mangoldeas to compete, retain customers and improve market share.

Instead of building out centralized innovation teams which cost a lot and have proved to be in-effective, now with the New Idea Campaign capability in Mangoldeas, organizations can make use of their most important asset - "Employees" - more effectively than ever before. Idea campaigns allow you to have hyper-focused idea generating sessions around business critical topics and engage your employees to post ideas, comment and vote on them. Because Idea campaigns are time bound and have a core idea reviewers team assigned, they have all the ingredients to make your campaign successful, focused and fast.

Mangoldeas offers an enterprise level solution that lays the foundation for employee innovation across organizational boundaries. Innovation arises when people connect with each other to solve a particular problem or create a new product or service. Mangoldeas enables innovation by providing a ideation platform where employees can capture and share ideas, monitor progress into ideas as people comment, vote and the ideas move through the different stages of validation. Once great ideas get identified they get converted in projects to be executed to achieve ROI.

High level capabilities include:

- Company idea dashboard gives you a snapshot view of all ideas, the most commented ones, most popular ones and the latest ideas and campaigns happening in your company.
- Ability to sort ideas and campaigns by recently, person, idea name, most commented, most popular and the ones that are patentable.
- Create new idea campaigns, select idea reviewers and even move existing ideas into a campaign to get your company ideas organized.
- Share ideas and campaigns with your colleagues and get them to participate by voting and comment on them.
- Perform complete idea management and see your ideas go from incubation, validation, review and see them converted to projects.
- Tag ideas and make them easy to find when you need to get back to them.
- Real time updates to your followers as your idea progresses in its lifecycle across all mobile platforms - iPhone, Android, Windows 7, Blackberry and the MangoApps Desktop application.

Your Wikis in MangoApps Move Up!

We listened to you - "our customer" and as a result wikis in MangoApps now have a workspace of their own. In the new wikis workspace you get updates and fast access to all your projects & groups knowledge base. Create new wiki pages, navigate and find the pages which otherwise might have gotten buried in an old project, update existing pages and compare 2 revisions of pages all from within the wiki workspace.

Quick access to people, projects, groups and your files

If you're anything like our CEO, one of your favorite capability in this release of MangoApps would be getting fast to the person, project, group or file that is important to you! The type ahead search boxes are a great way to do this. You can start typing the initial few characters of the thing you are looking for in the search box and there's now a drop-down that lists your colleagues, projects, groups and files. Also if you want to mention a colleague in your update just type "@" followed by first character of his or her name and you will be presented with a dropdown of colleagues you follow and others too which you can select from and mention without having to leave your current view.

Billing - It's simple now

- It is \$3 per user/month for a MangoApp and it's \$10 per user/month for ALL MangoApps now.

- If you pick 3 MangoApps. We give the 4th one (of your choice) for \$1 only. And the 5th & 6th MangoApps are FREE. This means - For all MangoApps you never pay more than \$10 per user/month.
- There is now a billing module for your Admin which gives full invoice history from the day your account was activated, ability to change credit card at any time, set email notifications for monthly invoices and also add or remove MangoApps at any time giving you full control over your monthly bill.

Identify your project and group top contributors

The feature is intended to give users deeper insight into the activity in their projects. Leaderboards can be accessed in any of your projects and groups. You will be able look at Top 5 lists over varying spans of time.

- Top Contributors - Project Leaderboards now tell you who the top 5 contributors are in your project.
- Top Replied to Members - Get to know the top 5 people in your project whose messages generated the most discussion
- Most Popular Members - Get to know the top 5 people in your project whose messages received the most likes.

If you looking at what it takes to rise to the top of your project leaderboard here are some tips:

- Be open. Share information that is helpful to others.
- Build a knowledge base using wiki pages and posts.
- Share project & group files with team members.
- Ask questions, call upon people's strengths. Give them an opportunity to demonstrate their expertise.
- Recognize people for their accomplishments.
- When posting a question, @mention the experts to help start a discussion.
- Create a weekly discussion series using project/group wikis.

Your Intranets can be social now with MangoApps Web Part

MangoApps Group Web Part and MangoApps Project Web Part can now be embedded into your intranet or web application and thereby bringing the power of social to your existing software. These web parts enable your employees, customers, partners or suppliers to be in the loop in real time and enable them to collaborate directly from within your extranet, intranet or web application. Write to us at mangoapps@mangospring.com to get more information on this capability.

All the above MangoApps capabilities are now live for everyone, so check it out and let us know what you think!
